Founding Software Engineer at Wavelength (W24)

$120K - $160K • 0.20% - 0.70%

Build Magical Customer Experiences

San Francisco, CA, US Full-time US citizen/visa only Any (new grads ok)

Apply now

About the role

What you'll do

You'll be responsible for shipping products from 0-1 and their maintenance once they're in production. We're a customer obsessed team and we also expect you to talk to our customers, iterate on what you push, and continuously improve. Most of all, you will be the sole architect, designer, and engineer on multiple systems across our stack

Technical Must-Have's

- High Level Proficiency in Go, Typescript, Python, Java, C/C++

- Designing / Working on Distributed Systems

Brownie Points (not required, but encouraged)

- Experience / Proficiency with Rust,

- Frontend Experience (React, Next.Js, similar)

What a Good Fit looks like

- Enjoy solving open-ended, challenging problems

- Value good design and UX (an eye for it)

- Thrive with owning end-to-end product development

- Able to easily communicate complex ideas simply

- Extremely Proactive (about everything)

What we Care about

- Customer Obsession: Our goal is to make every customer love what we build, whatever it takes.

- Beautiful Design: Software should be beautiful, it's in the details

- Accountability: Taking things end-to-end, owning up to when we make mistakes, and fully trusting each other along the way

- HighBar: We demand a high bar for ourselves, we expect you to have one to…

Founding Engineer (Fullstack) at Onlook (W25)

$130K - $200K • 1.00% - 4.00%

Cursor for Designers

San Francisco, CA, US / Remote (US; CA) Full-time US citizen/visa only Any (new grads ok)

Apply now

About Onlook

Onlook is on a mission to bring more people together in code. We built a visual editor that anyone can use to contribute code to real codebases – or, just create a website super fast.

Since launching, Onlook hit #1 on Hacker News, was the #1 trending repo on GitHub—above DeepSeek, Anthropic—and has earned over 19,000 GitHub stars.

If you're looking for an opportunity to be a part of a next-generation design-led company, Onlook might be the right place for you.

About the role

Skills: Next.js, Tailwind, Node.js, React, TypeScript, PostgreSQL

Since launching, Onlook hit #1 on Hacker News, was the #1 trending repo on GitHub – above DeepSeek + Anthropic – and has earned over 22,000 GitHub stars. We’re looking to bring on Onlook’s first Founding Engineer. You’re a full-stack engineer who is ready to build a generational design-led company.

This role requires autonomy - you’ll be setting standards for one of the fastest-growing open source projects backed by YC ever. You’ll help design and build an uncompromising visual IDE loved by tens of thousands of designers and engineers around the world.

###

Why Onlook exists

Software creation is still broken at its core. Design and engineering operate in parallel, constrained by single-player tools that limit explorat…

Founding Engineer, Full Stack at ProhostAI (S24)

$100K - $180K • 0.20% - 2.00%

AI Property Manager for Airbnb & Short-Term Rental Hosts

San Francisco, CA, US / Remote (US) Full-time Will sponsor Any (new grads ok)

Apply now

About ProhostAI

We are a YC S24 company on a mission to make every Airbnb host a 5-star host by automating and improving their operations with the help of AI. We are building an AI-powered operating system for hosts on Airbnb and other short-term rental platforms.

Our founding team consists of highly experienced technical leaders from Airbnb and Dropbox. We are looking to expand our small but mighty team.

About the role

Company Description

ProhostAI (YC S24) building an AI-powered operating system for Airbnb & short-term rental hosts. Our founding team consists of data scientists and engineers from Airbnb, Dropbox, Twitter and Harvard. We are backed by Y Combinator, Pear VC, Pioneer Fund, Data Tech Fund and others. Our founding team comes from Airbnb and Dropbox engineers and data scientists who are also hosts with a 4.99+ rating across thousands of stays.

Role Description

This is a full-time hybrid role based out of San Francisco. As a Full Stack Product Engineer, you will be responsible for end to end back-end and front-end web development. You will also work on AI/LLM powered features throughout our product. We are looking for a highly driven, product minded engineer who is excited to ship novel & delightful AI-powered user experiences to…

Founding Engineer at Orange Slice (S25)

$150K - $250K • 0.50% - 5.00%

Agentic sales enrichment spreadsheet

San Francisco, CA, US / Remote (US) Full-time US citizen/visa only Any (new grads ok)

Apply now

About the role

Skills: TypeScript

##

Founding Engineer — Orange Slice (YC)

###

About Orange Slice

Orange Slice helps revenue teams prospect, enrich, qualify, and automate GTM work with AI . Customers use it to turn messy intent and company context into actionable lists, enriched records, and workflows —from firmographics and contact verification to web research, social signals, and outreach drafting. The product spans a polished web experience (including spreadsheet-like execution and an AI agent) and tooling for builders who want the same capabilities in code or in Claude Code via a single install path.

We sit at the intersection of B2B data , LLMs , and workflow automation —where reliability, cost control, and great UX matter as much as model quality.

###

The role

We’re hiring a Founding Engineer to own major slices of the product and infrastructure alongside the founders. This is a high-ownership, high-trust role: you’ll ship user-facing features, harden core systems, and help define how we scale—not just close tickets.

You might work on:

-

Core product : Next.js App Router surfaces (dashboard research tools, spreadsheet workflows, agent/chat UX), performance, and end-to-end flows from signup to paid usage.

-

Data + AI execution : orchestrating long-r…

DRAFT EMAIL

Subject: Platform Engineering – Mark Allen Evans

Hi,

Checkr's push to own compliance and risk infrastructure at the scale of DoorDash and Coinbase — while landing Forbes Cloud 100 this year — caught my attention in a real way.

I'm Mark Allen Evans. I recently architected a multi-provider AI platform with routing, governance, and enterprise control surfaces across 11+ model providers — the kind of platform ownership this Director role seems to center on.

I'd welcome 20 minutes with whoever owns this search — or happy to send more context your way if that's easier.

If you're not close to hiring, no pressure — feel free to pass this along.

Cloud Engineer (Remote)

Joveo Ai · United Kingdom (Remote) · Remote ' · linkedin_jobs

75% fit

ROLE

About Joveo:Every company says they're "AI-first." We actually are. Joveo's recruitment advertising platform processes millions of hiring decisions through machine learning, real-time bidding, and predictive analytics — helping the world's largest employers find the right people, faster and fairer. But we're not done. Not even close.
Role: Cloud EngineerLocation: Remote
Role Overview:We are hiring a Cloud Engineer to design, deploy, and manage cloud-native infrastructure that powers Joveo's global platform. You will build resilient, scalable, and cost-optimized cloud systems — ensuring our infrastructure grows with the business without compromising performance or reliability.
Key Responsibilities:- Architect and deploy cloud infrastructure across AWS, GCP, or Azure- Implement infrastructure-as-code using Terraform or similar tooling- Optimize cloud resource utilization and manage cost governance- Design networking, security groups, IAM policies, and access controls- Support engineering teams with cloud migrations and modernization projects- Build runbooks and disaster recovery procedures for critical systems
Required Skills & Qualifications:- Deep hands-on experience with at least one major cloud platform- Proficiency in Terraform, Pulumi, or AWS CDK for infrastructure provisioning- Knowledge of networking fundamentals — VPCs, subnets, DNS, load balancers- Experience with cloud security best practices and compliance frameworks- Familiarity with Kubernetes, ECS, or serverless …

DevOps Engineer, Trilogy (Remote) - $100,000/year USD

75% fit

Crossover · London, England, United Kingdom (Remote) · Remote ' · linkedin_jobs

ROLE

You're the engineer who maintains uptime for 50+ SaaS products when others are still guessing. We need DevOps engineers who can step into unfamiliar AWS environments, bring order to instability, and drive availability beyond 99.9% through disciplined monitoring, automation, and root cause analysis. You'll break down complex projects into executable one-day increments, deliver production-ready Python or JavaScript, and leverage AI as your assistant.

Most organizations talk about "cloud-native" while manually tending infrastructure. We're systematizing reliability across dozens of acquired products where original teams have departed and documentation is incomplete. The challenge: you'll apply agents and contemporary tooling to understand new systems 5–10x faster, document your findings, and automate solutions so repeat failures are eliminated. Rather than judging you on certifications and buzzwords, we'll observe how you troubleshoot under pressure, author a genuine 5-Whys that identifies one preventable root cause, and construct automations that endure in production.

This is not a tier-2 "follow the runbook" position. Here, you author the runbooks, architect the deployment path from development through staging to gradual rollout with soak periods and rollback criteria, and implement monitoring that detects corner cases. You reject risky changes before they reach production. You distinguish infrastructure failures you own from application bugs Engineering owns, and you route …

DEEP EXTRACTION

HIRING CONTACT

No contact found yet — run scan to pull hiring manager via Netrows.

DRAFT EMAIL

Subject: DevOps Engineer role – worth a quick look?

Hi,

Crossover's model of maintaining 99.9%+ uptime across 50+ SaaS products simultaneously — without the luxury of familiarity — is exactly the kind of constraint that separates disciplined engineers from the rest.

I've been doing something adjacent: at AiAssist Secure, I designed secure runtime separation between customer-facing APIs and isolated execution services using signed internal requests, allowlisted access, and auditable actions across a multi-provider AI platform. Stability under complexity is the job.

I write production Python and JavaScript, work natively in AWS, and use AI tooling daily — not as a novelty.

If you're not the right person to send this to, no pressure — happy if you can point me in the right direction. Otherwise, I'd welcome 20 mins with whoever owns this.

Cloud Platform Engineer - AI Trainer

DataAnnotation · Canada (Remote) · Remote ' · linkedin_jobs

75% fit

ROLE

Join the DataAnnotation team and contribute to developing cutting-edge AI systems, while enjoying the flexibility of remote work and setting your own schedule.

We are looking for proficient programmers to help advance AI development. As a member of DataAnnotation's coding team, you'll be part of a growing community of over 100,000 professionals — including front-end, back-end, full-stack, machine learning, and other engineers — who are driving real-world impact in AI development.

Our platform offers an engaging blend of flexibility and challenge: you'll work closely with state-of the art AI models to take on programming tasks that include creating and solving challenging coding problems, building beautiful apps with rich functionality, and synthesizing insights through data analysis and visualization. Your work directly contributes to refining intelligent systems that learn, adapt, and evolve. Some team members fit this work alongside a full-time role, while others treat it as their primary focus, choosing projects and schedules that align with their availability and goals.

To get started, once you sign up for an account, you'll take a short assessment (this serves as our version of an interview). If you pass that assessment, you'll receive an email confirmation, and paid work will become available to you through our platform.

Benefits

Fully remote: work from anywhere in the US, Canada, UK, Ireland, Australia, and New Zealand.Flexible schedule: choose which projects you …

AI-Native Software Engineer - CDI Paris - Theodo

70% fit

Theodo · Greater Paris Metropolitan Region (Hybrid) · On-site · linkedin_jobs

ROLE

L'histoire de Theodo et son succès
Le groupe Theodo accompagne depuis 2009 les entreprises innovantes dans la conception, le développement et le déploiement de produits digitaux ingénieux, en tirant parti du meilleur de la technologie et de l'approche Lean.

Notre approche unique est fondée sur 3 principes :

nous avons développé des expertises reconnues dans les technologies clés de la conception et du développement produit; quelle que soit l'étape du projet, notre priorité à chaque décision est la création de valeur pour nos clients; nous recrutons les meilleurs talents digitaux et cultivons leur ingéniosité grâce à l'approche lean

Theodo connait une croissance exceptionnelle depuis 15 ans : nos équipes rassemblent plus de 700 Theodoers, principalement des Software Engineers, passionnés de technologie et d'amélioration continue. Avec la croissance, le groupe s'est structuré en entités spécialisées par technologies (Theodo Apps, Theodo Cloud, Theodo Data & AI) ou par industries (Fintech, Govtech, Healthtech, Consumer Products Goods). En 2025, le groupe Theodo génère 100M€ de CA.

Ton équipe :
Tu rejoindras une communauté tech de plus de 120 Theodoers : software engineers, tech leads, engineering managers et architectes, avec lesquels tu pourras échanger, apprendre et progresser au quotidien.

Chez Theodo, les techs travaillent en équipes projet, constituées en fonction des besoins de chaque client. Tu feras partie d'une équipe de Theodoers à taille humaine (4 à 5 perso…

AI Infrastructure Engineer

Intercom · London, England, United Kingdom (Hybrid) · On-site · linkedin_jobs

70% fit

ROLE

Intercom is the AI Customer Service company on a mission to help businesses provide incredible customer experiences.

Our AI agent Fin, the most advanced customer service AI agent on the market, lets businesses deliver always-on, impeccable customer service and ultimately transform their customer experiences for the better. Fin can also be combined with our Helpdesk to become a complete solution called the Intercom Customer Service Suite, which provides AI enhanced support for the more complex or high touch queries that require a human agent.

Founded in 2011 and trusted by nearly 30,000 global businesses, Intercom is setting the new standard for customer service. Driven by our core values, we push boundaries, build with speed and intensity, and consistently deliver incredible value to our customers.

What's the opportunity?

We’re looking for Senior+ AI Infrastructure Engineers to build the systems that train and serve Intercom’s next generation of AI products.

Intercom is an AI company that builds from the GPU all the way up to a user agent that resolves millions of customer service queries a month.

You’ll join a small, highly technical team working at the cutting edge of modern AI infrastructure. The AI Infra team built the training pipelines and runs the inference for custom models like Fin Apex, which outperforms frontier models in customer service tasks, and is the foundation of the AI Group's full stack approach to AI.

We’re Particularly Interested In Engineers Who …

AI & Automation Engineer, Endpoint Systems- Remote

70% fit

BeyondTrust · Canada (Remote) · Remote ' · linkedin_jobs

ROLE

BeyondTrust is a place where you can bring your purpose to life through the work that you do, creating a safer world through our cybersecurity SaaS portfolio.

Our culture of flexibility, trust, and continual learning means you will be recognized for your growth, and for the impact you make on our success. You will be surrounded by people who challenge, support, and inspire you to be the best version of yourself.

The Role

We’re looking for an Endpoint Systems Engineer with a passion for AI & automation, within modern device management. In this role, you’ll design, deploy, and continuously improve endpoint solutions that are intelligent, scalable, and secure. You’ll move beyond reactive support by leveraging automation, data, and AI-driven tools to enhance user experience and operational efficiency across the enterprise. This is a hands-on engineering role for someone who enjoys building smart systems, eliminating repetitive work, and shaping the future of endpoint management.

What You’ll Do

Design, deploy, and manage modern endpoint environments across Windows & macOS. Implement and maintain endpoint management platforms (e.g., Intune, Jamf) with a strong automation-first mindset Develop automation workflows using scripting, APIs, and orchestration tools to reduce manual effort and improve reliability Integrate AI-powered tools for endpoint analytics, remediation, security, and user experience optimization Build self-healing and self-service solutions for common endpoint …

DRAFT EMAIL

Subject: EDA team @ Nokia — infrastructure automation background, worth a look?

Hi,

Nokia's EDA launch caught my attention — cloud-native, event-driven network automation at that scale is exactly the problem space I've been working in.

I'm Mark. Most recently I architected a multi-provider AI platform with runtime isolation, signed internal request flows, and auditable control surfaces across 11+ model providers — the kind of governance and execution separation that maps directly to what EDA is building.

4 years in platform and AI systems engineering, strong in Python, Node.js, and TypeScript.

If you're not the right person to loop in, no worries — happy if you can point me that direction. Otherwise, I'd love 20 mins with whoever owns this.

Mark Allen Evans

Staff Platform Engineer, Canada

Ashby · Montreal, QC (Remote) · Remote ' · linkedin_jobs

70% fit

ROLE

We’re looking for a curious, rigorous, problem-hungry platform engineer (who codes!) to carry the ball as we bring Ashby to the big leagues. Ashby builds software that lets talent teams build an efficient, delightful, respectful hiring process. Similarly, you’re an engineer who wants to build a “paved road” that excellent engineering teams can safely take to the moon and back.

We have notable customers like Notion, Linear, Shopify, and Snowflake. Our growth and retention metrics are best-in-class among our peers: we have tens of millions in ARR, growing >100% year over year, over 2500 customers, very low churn, and many years of runway. We’ll share more details once we meet, but you now probably have a good idea as to why we're hiring for this role Ø=Þ .

We’ve listed this role twice: as a Platform Engineer and Site Reliability Engineer – our team does both, and we are open to candidates who lean towards one or the other.

About The Role And How We Work

Hi Ø=ÜK I’m Colin, Head of EMEA Engineering. I’ve spent a number of years leading engineering teams in startups, and that has always included being close to infrastructure teams - no matter what name they’ve worn (SRE, infrastructure, platform, etc). I’ve got my hands dirty building the initial infrastructure for startups and know the value a talented infrastructure engineer brings. The rigour, the discipline, the peace and quiet when everything just hums along.

Our infrastructure is in a good place for now. Nothing is static. …

Founding DevRel Engineer at Nozomio | Y Combinator Nozomio index anything. search it with ai. Founding DevRel Engineer $120K - $170K • 0.05% - 0.25% • San Francisco, CA, US Job type Full-time Role Operations Experience Any (new grads ok) Visa US citizen/visa only Connect directly with founders of the best YC-funded startups. Apply to role › Arlan Rakhmetzhanov Founder Arlan Rakhmetzhanov Founder About the role TL;DR We are hiring a founding DevRel Engineer for Nozomio, the context augmentation layer for AI agents. You will write content, documentation, and you will be the face of Nozomio for developers. You will define how AI engineers think about context, MCP servers, and agentic coding. You will own DevRel end to end and over time build the function around you. About Nia and Nozomio Nozomio is applied product and research lab. Our flagship product Nia is a context augmentation layer for AI agents, primarily coding agents. It indexes entire codebases, documentation, and external sources so agents always have the right context instead of guessing. Nia plugs in as an MCP server into tools like Cursor, Cline, and other coding agents, giving them a persistent, searchable, up-to-date knowledge base. Today, agents are very good at generating code but still bad at knowing which repo, package, or doc to look at. Context, not generation, is the bottleneck. Nia exists to solve that bottleneck so agents reach near superhuman code intelligence. Nozomio is backed by Y Combinator and rece…

Cloud Engineer - AI Trainer

DataAnnotation · United Kingdom (Remote) · Remote ' · linkedin_jobs

65% fit

ROLE

Join the DataAnnotation team and contribute to developing cutting-edge AI systems, while enjoying the flexibility of remote work and setting your own schedule.

We are looking for proficient programmers to help advance AI development. As a member of DataAnnotation's coding team, you'll be part of a growing community of over 100,000 professionals — including front-end, back-end, full-stack, machine learning, and other engineers — who are driving real-world impact in AI development.

Our platform offers an engaging blend of flexibility and challenge: you'll work closely with state-of the art AI models to take on programming tasks that include creating and solving challenging coding problems, building beautiful apps with rich functionality, and synthesizing insights through data analysis and visualization. Your work directly contributes to refining intelligent systems that learn, adapt, and evolve. Some team members fit this work alongside a full-time role, while others treat it as their primary focus, choosing projects and schedules that align with their availability and goals.

To get started, once you sign up for an account, you'll take a short assessment (this serves as our version of an interview). If you pass that assessment, you'll receive an email confirmation, and paid work will become available to you through our platform.

Benefits

Fully remote: work from anywhere in the US, Canada, UK, Ireland, Australia, and New Zealand.Flexible schedule: choose which projects you …

Platform Engineer

incident.io · London, England, United Kingdom (Hybrid) · On-site · linkedin_jobs

65% fit

ROLE

About Incident.io

incident.io is the leading AI incident response platform, built to help teams dramatically reduce incident response time and improve reliability. We bring together on-call, incident response, AI SRE, and status pages in a single platform, giving teams everything they need to respond quickly, reduce downtime, and keep customers in the loop.

Since launching in 2021, we've helped over 1,500 companies, including Netflix, Airbnb, and Block, run more than 500,000 incidents. Every month, tens of thousands of responders across Engineering, Product, and Support use incident.io to restore services faster, stay aligned under pressure, and focus on building what matters.

We're a fast-growing, highly ambitious team that cares deeply about our customers, product quality, and making it magic. We've raised $100M from Index Ventures, Insight Partners, and Point Nine, alongside founders and executives from world-class technology companies.

The Team

Our Platform Engineers are the people behind the curtain making sure everything runs smoothly. They own the infrastructure, deployment systems, and CI/CD pipelines that keep our product engineers moving fast without breaking things. If product engineers are the chefs, the platform team is the kitchen; designing, maintaining, and scaling the tools that make everything possible.

The current team consists of two highly capable engineers. As we grow, this role will play a key part in building and maintaining infrastructure to sup…

Staff AI Engineer (Global Security)

RBC · Toronto, ON (Remote) · Remote ' · linkedin_jobs

65% fit

ROLE

Job Description

What is the opportunity?

The Staff AI Engineer (Global Security) will be part of Global IT Risk's critical modernization initiative, designing and building advanced AI models that power our IT Risk & Control Assessment platform. Your models will provide data-driven Inherent and Residual Risk Ratings across all RBC applications globally, scaling our assessment capability from today's manual, subset approach to full automation across all domains. These Assessments aim to provide a data-driven Inherent and Residual Risk Rating for every application in RBC across domains of Risk. To conduct a Risk Assessment and their supporting calculations, several key data points are required, including Control Assessments, IT Issues Management findings, Control Environment details and Control Testing results. These data points will drive effectiveness and reliability in the calculation of Residual Risk. The Residual Risk and associated control gaps will then be aggregated to formulate action plans and a risk score for both domain owners and Applications to executives. This solution will scale out our assessment capability across all appcodes globally and domains and will direct leadership decisions on how to reduce the impact and likelihood of regulatory, financial or reputational risks to RBC.

What will you do?

Design and build AI models that automate control testing, risk assessment, and anomaly detection across IT domains, serving as consultant on the estate of models a…

Staff AI Engineer - Grafana Ops, AI/ML | Canada | Remote

65% fit

Grafana Labs · Canada (Remote) · Remote ' · linkedin_jobs

ROLE

Grafana Labs is a remote-first, open-source powerhouse. There are more than 20M users of Grafana, the open source visualization tool, around the globe, monitoring everything from beehives to climate change in the Alps. The instantly recognizable dashboards have been spotted everywhere from a NASA launch and Minecraft HQ to Wimbledon and the Tour de France. Grafana Labs also helps more than 3,000 companies -- including Bloomberg, JPMorgan Chase, and eBay -- manage their observability strategies with the Grafana LGTM Stack, which can be run fully managed with Grafana Cloud or self-managed with the Grafana Enterprise Stack, both featuring scalable metrics (Grafana Mimir), logs (Grafana Loki), and traces (Grafana Tempo).

We’re scaling fast and staying true to what makes us different: an open-source legacy, a global collaborative culture, and a passion for meaningful work. Our team thrives in an innovation-driven environment where transparency, autonomy, and trust fuel everything we do.

You may not meet every requirement, and that’s okay. If this role excites you, we’d love you to raise your hand for what could be a truly career-defining opportunity.

This is a remote opportunity and we would be interested in applicants from Canada time zones only at this time.

Staff AI Engineer

The Opportunity

At Grafana, we build observability tools that help users understand, respond to, and improve their systems – regardless of scale, complexity, or tech stack. The Grafana AI teams play a…

Staff Applied AI Engineer — Auggie Platform - CANADA (Remote)

65% fit

Luxury Presence · Greater Montreal Metropolitan Area (Remote) · Remote ' · linkedin_jobs

ROLE

Luxury Presence is building the AI growth platform for real estate. Backed by Bessemer Venture Partners and other top investors, we're a Series C company on track to hit $100M in annual recurring revenue in the next six months. More than 87,000 real estate professionals, including over 30% of the WSJ Real Trends top 100 agents in the United States, use us to run and grow their business.

The Opportunity

We don't just use AI. We build with it, ship with it, and think with it. We're in the top 1% of companies applying AI effectively, not just to our products, but to how we build them. With an unlimited budget for Anthropic tokens, our engineers use AI agents to write, review, and ship production code every day. We're building toward a world where humans design systems and AI builds them, and we're already further along that path than almost anyone else.

As a Staff Software Engineer, you'll be a technical leader at the center of this transformation. You'll shape platform architecture, drive AI-powered product delivery, and raise the bar for what a small, AI-augmented engineering team can accomplish. This is a role for someone who already lives in their terminal with AI, who has strong opinions about how AI changes system design, and who wants to help define what a next-generation engineering organization looks like.

What You'll Do as a Staff Engineer on Our Auggie Platform Team

Here are examples of the kinds of initiatives you'd work on today:

Multi-agent orchestration and …

Senior AI/LLM Engineer

Criteo · Paris, Île-de-France, France (Hybrid) · On-site · linkedin_jobs

60% fit

ROLE

What You'll Do:

We are looking for an experienced AI Engineer to join the Creator ML team.

We apply state of the art Machine Learning to optimize all possible aspects of the construction and serving of our banners. In this role, you will work across the full lifecycle of large language model applications: from dataset creation and evaluation to agent APIs, observability, and production-grade LLM features.

More broadly, within the Creator group, we are on a mission to revolutionize the creative capabilities offered to our clients across our commerce media platform. You will play a crucial role in shaping the landscape of Internet advertising, and you will have the opportunity to work on projects that impact billions of users worldwide.

Your main missions

Develop LLM-powered features which include optimizing prompts, model selection, and inference strategies for quality, latency, and cost. You will be implementing end-to-end observability capabilities and agent executions. As well, you will have the opportunity to shape the development of infrastructure for Agents and MCP-based agent interfaces to support Agentic Creative workflows. Ensure systems are robust, testable, and reproducible. You will be contributing to internal tooling for experimentation, evaluation, and monitoring of Large Language Models. Challenge the status quo of our creative tooling for creation and optimization by leveraging more recent advancements in Generative AI. You will as well partner closely wit…

Lead Agentic AI Engineer [Riyadh / Dubai]

60% fit

Talent Seed · Greater Paris Metropolitan Region (On-site) · On-site · linkedin_jobs

ROLE

This role requires relocation to Riyadh/Dubai
You'll shape the technical direction and bring ambitious AI concepts to life, turning prototypes into scalable, reliable products that power next-generation customer experiences. Working closely with engineers, tech leads, and the CTO, you'll design systems that combine cutting-edge AI, strong infrastructure, and human-centred design.
Experienced Required:
AI EngineeringHands-on experience building complex, production-grade LLM-based systems across real-world use cases.Advanced prompt engineering skills, with a strong intuition for how models interpret, prioritise, and follow instructions in multi-step and long-context workflows.Deep understanding of LLM evaluation—recognising the limits of off-the-shelf metrics and able to design custom evaluation frameworks that measure what truly matters.Experience designing agentic systems, including task decomposition, tool creation and orchestration, and reliability engineering for non-deterministic workflows.Actively engaged with the evolving AI ecosystem—tracking research, experimenting with new capabilities, and translating emerging ideas into practical solutions.Comfortable going beyond established patterns to design novel approaches when existing techniques are insufficient.
Software EngineeringStrong grasp of software engineering fundamentals, including clean abstractions, separation of concerns, and writing maintainable, extensible code.Solid architectural judgment, with the abili…

Applied AI Engineer

Sia · Paris, Île-de-France, France (On-site) · On-site · linkedin_jobs

60% fit

ROLE

Sia is a next-generation, global management consulting group. Founded in 1999, we were born digital. Today our strategy and management capabilities are augmented by data science, enhanced by creativity and driven by responsibility. We're optimists for change and we help clients initiate, navigate and benefit from transformation. We believe optimism is a force multiplier, helping clients to mitigate downside and maximize opportunity. With expertise across a broad range of sectors and services, our 3,000 consultants serve clients worldwide from 48 locations in 19 countries. Our expertise delivers results. Our optimism transforms outcomes.

Sia's AI & Data Business Unit is the powerhouse of our firm's innovation—merging cutting-edge Data Science, Generative AI, and advanced digital solutions to transform industries. With over 350 experts worldwide, we tackle projects from proof-of-concept to large-scale deployment, always pushing the boundaries of AI capabilities. Our 12 R&D labs in Europe and North America drive continuous research in areas like computer vision, MLOps, and deep learning, partnering closely with our business consultants for real-world impact. By joining Sia's AI & Data team, you'll step into a vibrant, collaborative environment that nurtures professional growth and empowers you to shape the future of AI-driven consulting.

Staff AI/ML Engineer

Tetrix · Montreal, QC (Hybrid) · On-site · linkedin_jobs

60% fit

ROLE

'(Overview

Tetrix is a fast-growing startup on a mission to empower institutional investors to confidently invest in alternative markets (think Bloomberg, but for private markets). Our AI-native product transforms messy, unstructured private market data into real-time insights, combining automated document retrieval, AI-powered data extraction, and on-demand portfolio analytics - all in one seamless platform. We are growing quickly to becoming a category-defining product, and are working with some of the world's leading capital allocators. This is a unique opportunity to join a talented and driven team that wants to build next-generation infrastructure in financial markets, and is backed by stellar investors that include Innovation Endeavors, Eric Schmidt's VC firm, and angels from BlackRock, CPPIB, SoftBank, Lending Club, and Plaid.

Ø>Ý7Ø<ßýþ Who We Are

We are a small but mighty startup with deep industry background and expertise in both financial markets and modern technologies. We've worked hard to build a culture of trust, high ownership, and curiosity—where everyone feels empowered to contribute, challenge ideas, and grow together. We are led by our two co-founders, Olivier (CEO) & Naunidh (CTO), who met on the first day of school whilst pursuing their MBAs at Stanford and co-founded Tetrix in the Summer of 23.

Ø>Ý Ø<ßý Who You Are

You're proactive and hands-on – someone who takes initiative, figures things out, and keeps things moving. You learn and adapt quickly – someone …

AI Developer – Agentic System

Xanadu · Toronto, ON (On-site) · On-site · linkedin_jobs

60% fit

ROLE

About Xanadu

Xanadu's mission is to build quantum computers that are useful and available to people everywhere.

At Xanadu, we are learners, innovators, researchers, collaborators and problem solvers. We are creating something that has never been built before. Few people in their life will be able to be a part of something like this, where if we are successful, the technologies we develop will solve some of the world's most challenging problems, and literally change the world. And that is something to be excited about!

Your Role And Responsibilities

As an AI Developer at Xanadu, you will play a crucial role in integrating generative AI into our R&D methodologies. This unique position allows you to contribute to the development of our internal tool stacks, aimed at advancing the first commercially viable quantum computer. The AI team's focus is to build and improve the modeling, optimization, simulation, data processing, and design methodology of our internal research. Situated at the intersection of multiple technical disciplines, you will have the opportunity to work with world leading researchers, scientists, engineers, and software developers. By infusing cutting-edge AI into software tools, you have the chance to super-charge their research progress and even reshape how they work. You will:

Design, develop, and maintain our agentic AI research system for accelerating internal R&D.Build automated processes and pipelines for structuring unstructured documents and execut…

Our mission is to democratize video by solving the hard problems developers face when building video: video encoding and streaming (Mux Video), video monitoring (Mux Data), and more. Video is a huge part of people's lives, and we want to help make it better. We're committed to building a healthy team that welcomes diverse backgrounds and experiences. We want people who care about our mission, are ready to grow, believe in our values (from Be Human to Turn Customers Into Fans), and want to improve the people around them. You'll join a tight-knit team with experience at places like Google, YouTube, Twitch, Reddit, Zencoder, Fastly, and more. Our founders previously started (and sold) Zencoder, an early leader in cloud video technology, and authored Video.js, the biggest HTML5 video player on the web. We organize Demuxed , the premier conference for video engineers in the world. We're backed by top investors like Coatue, Accel, Andreessen Horowitz, and Y Combinator. You'll get to work with amazing companies: hundreds of startups, plus Strava, Patreon, Vimeo, Robinhood, PB…

Platform Engineer

60% fit

Connells Group · Milton Keynes, England, United Kingdom (Hybrid) · On-site · linkedin_jobs

ROLE

We are looking for a Platform Engineer to join our Group Technology team in Milton Keynes. You will be responsible for developing and maintaining components of the ConnellsX Platform. Your success is directly tied to enabling engineering teams to efficiently deploy, monitor, and scale their services on the platform. Your technical expertise and collaborative approach will drive both tactical implementations and contribute to strategic platform evolution.

You will be a hands-on engineer with a customer-centric mindset, working directly with development teams to understand their needs and deliver solutions. You will work across multiple technical domains including orchestration, automation, CI/CD pipelines, cloud services, observability, and security, developing deeper expertise in areas that align with platform priorities and your interests. Experience with Microsoft Azure is essential.

Daily coding is a core expectation of this role. You will implement platform features, automation tools, and infrastructure improvements while collaborating with team members to share knowledge and best practices. You will help establish Platform Engineering practices at Connells by mentoring colleagues and contributing to technical standards and documentation.

The platform team operates with a focus on automation and efficiency, maintaining a lean structure where engineers contribute across multiple areas of expertise. You will work alongside specialists in site reliability, onboarding, archit…

Platform Engineer

60% fit

Cellular Origins · Cambridge, England, United Kingdom (On-site) · On-site · linkedin_jobs

ROLE

Company Description

Cell therapies have been shown to cure devastating and previously untreatable diseases like cancer by re-programming the patient's own immune system. Giving more patients access to these life-saving therapies requires a revolution in manufacturing and process automation.

Cellular Origins, is enabling scalable, cost-effective and efficient manufacture of cell and gene therapies. Our technology addresses the challenges associated with manufacturing at scale with an elegant robotic manufacturing automation solution that reduces cost and labour, eliminates human error, and increases efficiency.

Job Description

As a Platform Engineer at Cellular Origins, you'll work alongside Senior Engineers to design, build, and maintain the network and on-prem server infrastructure that powers our cell-therapy automation factory services. Partnering closely with our software-engineering teams, you'll help automate build tasks, create self-service environments, and promote smooth collaboration between dev and ops. In this role, you'll contribute to maintaining and extending the factory architecture—from rack-level physical layout through to servers, switching, firewalls, and storage fabrics. You'll assist with managing our on-prem hypervisors, IaaS/PaaS layers, and containerised workloads, gaining exposure to the full stack that supports our production systems.

Working within a DevOpsSec mindset, you'll help craft secure, repeatable deployment patterns for both the facto…

Datacenter Deployment Engineer

60% fit

Nscale · London, England, United Kingdom (Remote) · Remote ' · linkedin_jobs

ROLE

About Nscale

Nscale is the GPU cloud engineered for AI. We provide cost-effective, high-performance infrastructure for AI start-ups and large enterprise customers. Nscale enables AI-focused companies to achieve superior results by reducing the complexity of AI development. Our GPU cloud bolsters technical capabilities and directly supports strategic business outcomes, including cost management, rapid innovation, and environmental responsibility.

At Nscale, our Deployment team plays a critical role in driving the delivery of our GPU infrastructure into our DCs.

We thrive on a culture of relentless innovation, ownership, and accountability, where every team member takes pride in their work and drives it with excellence and urgency. As an Nscaler, you'll build trust through openness and transparency, where everyone is inspired to do their best work. If you join our team, you'll be contributing to building the technology that powers the future

About The Role

We're looking for a Datacenter Deployment Engineer.

This role will be responsible for the execution of physical deployments, you will be engaged in the design and layout of large scale GPU infrastructure projects. This will range from ensuring BOMs are complete and compatible, through to laying out the physical hardware in racks, cabling, and everything inbetween.

What You'll Be Doing

Layout of IT equipment inside the datacentersTaking BOMs and ensuring all hardware fits into available space, applying best practice to…

Sr Cloud Platform Engineer WOTC

Wizards of the Coast · Montreal, QC (On-site) · On-site · linkedin_jobs

60% fit

ROLE

At Wizards of the Coast, we connect people around the world through play and imagination. From our genre-defining games like Magic: The Gathering® and Dungeons & Dragons® to our growing multiverse, we continue to innovate and build new ways to foster friendship and connection. That's where you come in!

We are seeking a Senior Cloud Platform Engineer to join our Central Technology Build Engineering team as we develop and curate an Unreal Engine ecosystem to share across our internal game studios. You will join a specialized team responsible for unblocking developers, ensuring build stability, and optimizing iteration workflows across multiple concurrent titles. This is a hands-on IC role where engineering excellence meets operational reliability. You'll collaborate closely with game development teams to ensure a seamless experience for all Unreal-powered studios under our banner. In this role, you will design, build, and run scalable AWS architectures that serve as the backbone for deploying our Unreal Engine build systems and tools.

What You'll Do:

Work with the team to design a ready-made cloud-first suite of Unreal Engine build systems and tooling Develop and maintain infrastructure-as-code to ensure consistency and repeatability Support ongoing AWS operations for build infrastructure Support and administer studio-specific Perforce environments Work with studio teams to optimize our systems for cost, scale, and latency Define standards and best practices for performance,…

Staff AI Engineer - Notebooks

55% fit

Datadog · Paris, Île-de-France, France (Hybrid) · On-site · linkedin_jobs

ROLE

We're looking for a Staff Software Engineer with deep experience in AI/ML to join the Notebooks team. Datadog Notebooks provide a flexible tool for ad-hoc data analysis, collaborative investigations, and technical documentation. Its fluidity makes it an ideal surface for agents and humans to interact. The Notebook team is building AI-driven workflows for natural-language data analysis, assisted graph generation, automated investigations, and more. You will act as a technical leader in this domain, focused on building industry-leader AI-powered features. We're looking for a product-minded ML engineer with strong technical expertise, excellent communication skills, and a track record of driving impactful initiatives end to end.

At Datadog, we place value in our office culture - the relationships and collaboration it builds and the creativity it brings to the table. We operate as a hybrid workplace to ensure our Datadogs can create a work-life harmony that best fits them.

What You'll Do:

Spearhead AI initiatives within Notebooks, serving as the technical owner for the design, development, and deployment of ML/AI-driven features.Shape the long-term technical direction and strategy for AI workflows within Notebooks and related products.Champion the full development cycle: from rapid prototyping and defining success metrics/evaluations to running experiments, iterating, and achieving production-ready scale and reliability.Drive product direction with a strong user focus, always …

AI Engineer

Publicis Re:Sources · Paris, Île-de-France, France (Hybrid) · On-site · linkedin_jobs

55% fit

ROLE

Description De L'entreprise

Publicis Re:Sources is the global backbone of Publicis Groupe, delivering advanced technology and operational solutions. The GenAI team leads innovation in generative AI, developing and deploying large language models (LLMs) and advanced AI technologies for business impact.

Descriptif du poste

We are seeking an experienced AI/ML Engineer to design, build, and scale our generative AI solutions. In this role, you will lead initiatives around large language models, image and multimodal generation, and the deployment of these technologies in production using Google Cloud Platform (GCP). You will set technical standards for GenAI, mentor the team, and ensure best practices in software engineering, collaboration, and code quality.

Responsabilités

Architect and develop backend services, APIs, and orchestration layers that power GenAI features, including LLM-driven workflows (RAG, agents, content generation) and image generation pipelines.Own end-to-end delivery of GenAI-powered features: from system design and implementation to deployment, monitoring, and iteration.Build and maintain scalable, production-grade infrastructure across GCP and Azure, leveraging services such as Vertex AI, Cloud Run, Azure OpenAI Service, Azure Web Apps, and Azure Application Insights.Design and maintain CI/CD pipelines for GenAI applications, ensuring reliable deployment, versioning, and rollback of model integrations and service dependencies.Enforce software engineering…

Staff AI Engineer

Gorgias · Paris, Île-de-France, France (Hybrid) · On-site · linkedin_jobs

55% fit

ROLE

We believe conversations will become the #1 way to shop.

At Gorgias, we’re building the platform that makes this real: a unified AI agent that sells, supports, and re-engages customers across the entire journey. Conversational Commerce is the future of ecommerce, and we’re leading that shift.

Our mission is to turn every interaction between a brand and its customers into a relationship: personal, seamless, and intelligent. By combining deep product expertise with the latest in AI, we’re making shopping feel more natural, human, and connected than ever before.

To win, we focus relentlessly on:

Quality: conversations that feel authentic and on-brand.Experience: effortless shopping from chat to checkout.Re-engagement: personal, 1-1 dialogue instead of noisy marketing.

The opportunity is massive. As AI reshapes how people buy, Gorgias is building the foundation for the next decade of ecommerce, where every brand has its own intelligent agent and every customer feels understood.

Join us to make Conversational Commerce real.

Team & Context

Gorgias is an AI-first company building products powered by LLMs and agent-based systems.

As we scale our AI capabilities, we need to improve how we evaluate, iterate, and operate these systems in production. Today, parts of this process remain manual or fragmented, especially around prompt iteration, validation, and evaluation workflows.

This role will focus on building and scaling the systems that support AI evaluation and iteration, …

Ingénieur en science des données Intelligence Artificielle expérimenté H/F - IBM…

55% fit

IBM · Strasbourg, Grand Est, France (Hybrid) · On-site · linkedin_jobs

ROLE

Introduction

Une carrière chez IBM Consulting repose sur des relations clients durables et une étroite collaboration à l'échelle mondiale. Vous travaillerez avec des entreprises de premier plan issues de tous les secteurs, en les aidant à définir leur stratégie en matière de cloud hybride et d'intelligence artificielle. Grâce au soutien de nos partenaires stratégiques, à la technologie robuste d'IBM et à Red Hat, vous disposerez des outils nécessaires pour susciter des changements significatifs et accélérer l'impact sur nos clients. Chez IBM Consulting, la curiosité est le moteur de la réussite. Vous serez encouragé à remettre en question les normes, à explorer de nouvelles idées et à créer des solutions innovantes qui produisent des résultats concrets. Notre culture de croissance et d'empathie met l'accent sur votre développement de carrière à long terme tout en valorisant vos compétences et vos expériences uniques.

Your Role And Responsibilities

Dans un contexte d’accélération des usages de l’intelligence artificielle, nous recherchons un(e) Ingénieur en science des données Intelligence Artificielle expérimenté capable d’intervenir sur l’ensemble du cycle de vie d’un produit IA, depuis l’identification des opportunités métier jusqu’à l’industrialisation et au suivi en production. Ce rôle couvre aussi bien le machine learning classique que le deep learning, l’IA générative, l’IA agentique, les modèles multimodaux, l’évaluation de modèles, l’ingénierie de données pour l’IA…

AI Engineer H/F

Inetum · St.-Ouen, Île-de-France, France (On-site) · On-site · linkedin_jobs

55% fit

ROLE

Description De L'entreprise

Inetum est un leader européen des services numériques. Pour les entreprises, les acteurs publics et la société dans son ensemble, les 28 000 consultants et spécialistes du groupe visent chaque jour l'impact digital : des solutions qui contribuent à la performance, à l'innovation et au bien commun.

Présent dans 19 pays au plus près des territoires, et avec ses grands partenaires éditeurs de logiciels, Inetum répond aux enjeux de la transformation digitale avec proximité et flexibilité.

Porté par son ambition de croissance et d'industrialisation, Inetum a généré en 2023 un chiffre d'affaires de 2,5 milliards d'€.

Pour répondre à un marché en croissance continue depuis plus de 30ans, Inetum a fait le choix délibéré de se recentrer sur 4 métiers afin de gagner en puissance et proposer des solutions sur mesure, adaptées aux besoins spécifiques de ses clients : le conseil (Inetum Consulting), la gestion des infrastructures et applications à façon (Inetum Technologies), l'implémentation de progiciels (Inetum Solutions) et sa propre activité d'éditeur de logiciels (Inetum Software). Inetum a conclu des partenariats stratégiques avec 4 grands éditeurs mondiaux - Salesforce, ServiceNow, Microsoft et SAP et poursuit une stratégie d'acquisitions dédiée afin d'entrer dans le top 5 européen sur ces technologies et proposer la meilleure expertise à ses clients.

Tous nos postes sont ouverts aux personnes en situation de handicap.

Cloud Security Engineer

55% fit

Flo Health Inc. · London, England, United Kingdom (Hybrid) · On-site · linkedin_jobs

ROLE

500M+ downloads. 80M+ monthly users. A decade of building – and we’re still accelerating.

Flo is the world’s #1 health & fitness app worldwide on a mission to build a better future for female health. Backed by a $200M investment led by General Atlantic, we became the first product of our kind to reach a $1B valuation in 2024 – and we’re not slowing down.

With 7M paid subscribers and the highest-rated experience in the App Store’s health category, we’ve spent 10 years earning trust at scale. Now, we’re building the next generation of digital health – AI-powered, privacy-first, clinically backed – to help our users know their body better.

The job

The Scale of the Challenge

At Flo we don't just have users, we have a global community. We are the #1 women's health app, in the last month alone, we saw 8.6M new installs and a 2.8M increase in active users.

When millions of people trust you with their most personal health data, security isn't a feature — it's a foundation. We are looking for a Cloud Security Engineer to join Velocity, our Internal Platform team. Your mission is to ensure that every system, pipeline, and tool our engineers rely on is secure by default — so they can ship fast without ever compromising trust.

The Mission: Velocity

The Velocity team exists to eliminate friction. We build and own the foundation everything else runs on: cloud infrastructure, developer tooling, and SRE practices. You will:

Embed Security Into the Platform: Bake security, compliance…

Infrastructure Engineer (Linux) - £110k-£130k + bonus

55% fit

Vertus Partners · London Area, United Kingdom (Hybrid) · On-site · linkedin_jobs

ROLE

IT Infrastructure Engineer – Buy-Side Technology – London (Hybrid)
We are partnering with a buy-side firm in London that is looking to hire an Infrastructure Engineer to help build, improve, and take ownership of their internal infrastructure environment. This is a hands-on engineering role with a strong focus on Linux, automation, and infrastructure improvement rather than pure support.
The firm is in the process of bringing more infrastructure capability in-house and reducing reliance on external providers, so this role offers a genuine opportunity to influence how infrastructure is managed, automated, and developed going forward.
The OpportunityYou will be responsible for maintaining and improving the infrastructure that supports trading systems, development environments, and internal platforms. The role sits alongside a platform team working on cloud and platform tooling, and you will work closely with them while focusing more on core infrastructure, Linux systems, storage, and data centre environments.This role would suit someone who enjoys fixing inefficiencies, automating manual processes, and introducing better ways of managing infrastructure rather than just keeping systems running.
What You'll Be DoingThe role will involve a mix of infrastructure engineering, automation, and project work. This includes managing Linux servers and storage environments, improving monitoring and resilience, automating operational tasks, and working on infrastructure projects such as sto…

Ricoh Europe · London, England, United Kingdom (On-site) · On-site · linkedin_jobs

ROLE

Change your job, change your workplace, change your future...

Ricoh are currently recruiting for a Senior Platform Reliability Engineer (Operations) based in London. This role is a senior, hands on engineering role responsible for the reliability, resilience, and operational integrity of Ricoh's hybrid and cloud platforms.

The role focuses on operating, stabilising, and continuously improving live platforms, ensuring services meet defined availability, performance, security, and compliance standards. It combines deep operational expertise with strong automation, Infrastructure as Code (IaC), and observability capability to reduce toil, improve recovery, and enable predictable service outcomes.

Ricoh transforms organisations, using innovative technologies and services enabling you as an individual to work smarter. This is what we call "empowering digital workplaces".

In fact the entire Ricoh workforce enjoys our pioneering and innovative ways of working. We like to call it: imagine. change., it's the ethos of our brand and how we drive positive change for ourselves and others. Our teams are embracing change, fostering new ways of working and we have never been more resolute in our mission - "you work for us, and we`ll work for you".

What you will be doing

Deliver standards for availability, latency, performance, capacity, and scalability.Take part in root-cause analysis and problem management for major incidents.Champion blameless post-mortem culture and ensure actions a…

AI Operations Developer

Docebo · Toronto, ON (Hybrid) · On-site · linkedin_jobs

55% fit

ROLE

Artificial Intelligence. Actual Impact.

At Docebo, we're using AI to change how people learn at work—and we mean actually change it. We're an AI-powered learning platform that helps organizations create, deliver, and manage training all in one place. But our real mission goes deeper: we help teams move faster, work smarter, and focus on the work that truly matters. Our platform is built with intelligent, time-saving tools that personalize learning, eliminate busywork, and turn training from a checkbox into a superpower. The result? Better experiences for learners and real results for businesses.

We're shaping the future of learning with a team that isn't afraid to challenge the status quo. If you're excited by the idea of using AI to make work-life better for real people–you'll feel right at home here. And it's not just what we build, it's how we show up. At Docebo, our values aren't just posters on the wall—they guide how we work every day. We call it the Docebo Heart: trust by default, assume positive intent, and create space for different perspectives to thrive.

So… what are you waiting for? Join 900+ Docebians around the world and help us reinvent the way people learn, because learning never stops.

The Adventure Ahead Ø=Þ€

You are joining a small, high-impact team at the forefront of the AI revolution where we don't just talk about the future—we build it. As an AI Operations Developer, your mission is to transform Docebo's internal engines by shipping AI-native applica…

Great Foods - Egyptian International For Food Products · Montreal, QC (Hybrid) · On-site · linkedin_jobs

ROLE

Company DescriptionGreat Foods is one of Egypt's largest food companies and a key part of the El Naggar Group. Founded in 1978, Great Foods employs over 2000 individuals across six factories. We specialize in producing a wide variety of products including meats, fruits, jams, juices, and canned goods, marketed under the brand names Al Marai, OK, Juicy Up, and Royal. Our range of over 100 products caters to both local and international markets.
Great Foods is going all in on AI.We're building internal tools that automate the way we work — and we're not looking for just any coder. We want someone who can use AI to build code (not sit and write it manually all day). Think GitHub Copilot, Claude, and other generative AI tools as your partners in crime.This is not a back-office dev role — you'll be front and center, walking through every department, understanding how people actually get work done, and automating the repetitive parts of their job.You'll speak to logistics, QA, sales, accounting — learn their workflows — and then create smart, AI-powered tools to remove inefficiencies. We're giving you the room to build solutions that scale with our growing company.This is a full-time hybrid role based in Montreal. You'll be expected to work 3–4 days per week in the office, alongside the team.Ø=Þàþ What You'll DoShadow and map out workflows across every departmentInterview team members to understand their daily responsibilities and pain pointsUse AI tools (ChatGPT, Copilot, etc.) to g…

Operational AI Automation Developer

55% fit

Softchoice · Toronto, ON (On-site) · On-site · linkedin_jobs

ROLE

Why You'll Love Softchoice

We are a software-focused IT solutions and services provider that equips organizations to be agile and innovative, and for their people to be engaged, connected, and creative at work. That means moving them to the cloud, helping them build the workplace of tomorrow, and enabling them to make smarter decisions about their technology. By doing these things we help them create success for their customers and their people.

We stand proudly for our people and support their success through career development and advancement. We are recognized and respected for our culture of inclusion and belonging, continuously striving to do what's good for our people and communities.

The Impact You Will Have

The Operational AI Automation Builder is a hands-on AI builder who accelerates operational modernization by turning solution designs into shipped scalable automations across the Microsoft Power Platform. Reporting to the Director, Customer Success & Operations Improvement, you will partner closely with a Sr. Operational Automation & AI Specialist (solution architect/process designer) to execute step-by-step automation designs using Power Apps, Power Automate, Copilot Studio, and Microsoft's broader AI & automation toolset.

This role is ideal for an advanced citizen developer who thrives on delivery: building dependable workflows, apps, and copilots that reduce manual effort, improve quality, and create repeatable operational capabilities. You will also contrib…

Director, Agentic AI Solutions Architect

Mastercard · Toronto, ON (Hybrid) · On-site · linkedin_jobs

55% fit

ROLE

Our Purpose

Mastercard powers economies and empowers people in 200+ countries and territories worldwide. Together with our customers, we’re helping build a sustainable economy where everyone can prosper. We support a wide range of digital payments choices, making transactions secure, simple, smart and accessible. Our technology and innovation, partnerships and networks combine to deliver a unique set of products and services that help people, businesses and governments realize their greatest potential.

Title And Summary

Director, Agentic AI Solutions Architect

Overview

Services within Mastercard is responsible for acquiring, engaging, and retaining customers by managing fraud and risk, enhancing cybersecurity, and improving the digital payments experience. We deliver value added services by combining traditional management consulting with Mastercard’s data, AI assets, proprietary platforms, and execution expertise to provide clients with powerful strategic insights and recommendations.

The Mastercard Agent Suite team is building what’s next at the intersection of AI, commerce, and payments. Launched in 2026, Agent Suite is a global product that enables enterprises to build, test, and deploy customizable agentic AI systems within their own infrastructure. As agentic AI moves from experimentation to production, Mastercard occupies a unique position of trust, network reach, and advisory depth to make this transition safe, responsible, and impactful for the world’s leading …

Electronic Arts (EA) · Vancouver, BC (Hybrid) · On-site · linkedin_jobs

ROLE

Description & Requirements

Electronic Arts creates next-level entertainment experiences that inspire players and fans around the world. Here, everyone is part of the story. Part of a community that connects across the globe. A place where creativity thrives, new perspectives are invited, and ideas matter. A team where everyone makes play happen.

Our EA Experiences group (XO) is dedicated to ensuring great experiences for our growing communities centered around our world-renowned brands, including fan-favorites like Apex, Battlefield, EA SPORTS FC, Madden NFL and The Sims, just to name a few. We're a multi-functional group, with world-class expertise building fandoms, driving interactive storytelling, and positioning our franchises at the center of the broader entertainment ecosystem. We inspire, connect, and engage fans through culturally relevant content, intentionally architected journeys across channels, and meaningful fan care. Our goal is to provide valuable, easy experiences that fans love – in our games, around our games, and through innovative adjacent experiences to grow and enrich how fans experience EA as we shape the future of entertainment.

To empower more players and fans in new and amazing ways, we need more innovators to join our world-class team. The future of entertainment is interactive, and you can help lead that future, by growing and enriching how hundreds of millions of people (and counting) find joy and belonging, forge friendships, and celebrate th…

Sagard · Toronto, ON (On-site) · On-site · linkedin_jobs

ROLE

Sagard Overview

Sagard is a multi-strategy alternative asset management firm active in venture capital, private equity, private credit and real estate. Sagard also engages in private wealth management through Sagard Wealth.

Founded in 2016 and guided by the core values of entrepreneurship, innovation, collaboration, rigour and authenticity, Sagard has experienced outstanding growth. Today, the firm has more than US$45 billion under management, 190 portfolio companies and 540 professionals.

Sagard is well positioned to continue to grow substantially, organically and inorganically, pursuing its vision of becoming one of the best-performing investment management firms. Headquartered in Canada, Sagard currently has offices in Canada, the United States, Europe and the Middle East.

More at https://www.sagard.com

Position Overview

Sagard is on a journey to become an AI-first organization. We believe artificial intelligence will reshape the workplace by automating repetitive tasks and enabling teams to focus on higher-value, strategic work.

The AI Builder / Forward Deployed Engineer will work closely with business teams across investment, finance, compliance and operations to identify high-value opportunities and build practical AI-enabled solutions. As part of a small and agile AI and Data team, the role combines technical development, experimentation and cross-functional collaboration to rapidly prototype, deploy and scale solutions that improve how work is done across the f…

Established in 2014, Checkr's innovative technology and robust data platform help customers assess risk and ensure safety and compliance to build trusted workplaces and communities. Checkr has over 100,000 customers including DoorDash, Coinbase, Lyft, Instacart, and Airtable. We're a team that thrives on solving complex problems with innovative solutions that advance our mission. Checkr is recognized on Forbes Cloud 100 2025 List and is a Y Combinator 2024 Breakthrough Company . In an AI-driven world, distinguishing real from fake is increasingly challenging. AI has made it easy to forge credentials, impersonate individuals, and submit job applications at scale using synthetic identities. More than a third of remote applicants are fake, and Fortune 500 companies experienced a significant rise in hires from state-sponsored fraudulent actors last year. AI has turned the hiring funnel from a protective filter into an open gateway for bad actors. Che…

Software Engineer, Cloud Infrastructure

OpenAI · London, England, United Kingdom (On-site) · On-site · linkedin_jobs

50% fit

ROLE

About The Team

The Applications Engineering team works across research, engineering, product, and design to bring OpenAI's technology to consumers and businesses.

You'll join the team responsible for running the core infrastructure that supports products like ChatGPT and the API. The systems we support include our kubernetes clusters, infrastructure deployment, our networking stack, cloud abstractions, and more.

We seek to learn from deployment and distribute the benefits of AI, while ensuring that this powerful tool is used responsibly and safely. Safety is more important to us than unfettered growth.

About The Role

The cloud infrastructure team builds and maintains infrastructure abstractions allowing OpenAI to ship products quickly and scalably.

In This Role, You Will

Design and build the development and production platforms that power our products, enabling reliability and security at scaleEnsure our infrastructure can scale to the next order of magnitudeHelp create a diverse, equitable, and inclusive culture that makes all feel welcome while enabling radical candor and the challenging of group thinkLike all other teams, we are responsible for the reliability of the systems we build. This includes an on-call rotation to respond to critical incidents as needed.

You Might Thrive In This Role If You

Have 5+ years building core infrastructureHave experience operating orchestration systems such as Kubernetes at scaleHave experience building abstractions over cloud pla…

ROLE

At Red Bull Technology, peak performance isn't just for the track - it's built behind the scenes. Our Support Functions power every aspect of our success so If you thrive in a fast-paced, high-performance environment and want to be part of something extraordinary, we want to hear from you!
Purpose: Design, build and operate resilient, secure and scalable infrastructure that underpins HPC engineering, DevOps and simulation workloads across on-premises and cloud environments. The role focuses on delivering well-engineered compute, storage, networking and virtualisation foundations using Linux-based systems, automation and Infrastructure-as-Code practices. Working closely with Developer teams, InfoSec and wider IT, this role contributes to the reliable operation and continuous improvement of the infrastructure platforms and services provided. The role also requires a foundational understanding of High Performance Computing (HPC) environments and practical experience supporting datacentre operations, including hardware installation, diagnostics and break/fix activities.
Accountabilities: Design, implement and operate core infrastructure services end-to-end (compute, storage, virtualisation, networking and supporting services) for the Technology CampusBuild and maintain reliable Linux-based infrastructure, including provisioning, patching, hardening and lifecycle managementOwn and continuously improve on-premises and cloud infrastructure environments, proactively monitoring perfor…

AI Engineering Intern, Voice & LLM Systems

20% fit

Presto Phoenix, Inc. · Ontario, Canada (Remote) · Remote ' · linkedin_jobs

ROLE

About Presto Phoenix, Inc.

Presto is the leading Voice AI company for restaurant drive-thrus, operating at scale in complex, noisy, customer-facing environments. As the AI partner to more than a dozen of the most iconic American restaurant brands, Presto is building one of the most impactful real-world applications of AI, directly improving revenue, labor efficiency, and guest experience for millions of people.

Founded by alumni from MIT, the University of Waterloo and University of Illinois, Presto is built on a deeply technical, entrepreneurial engineering culture. We place a premium on ownership, speed, and first principles thinking, empowering engineers to move quickly, experiment boldly, and solve hard, real-world problems.

AI is not a feature at Presto, it is the foundation of how we build, evaluate, and evolve our products. We are backed by Remus Capital, were a Y Combinator company, and are headquartered in Silicon Valley.

This may not be the right fit if you're looking for a passive, low-ownership internship. We move at the pace of AI. Presto is for builders, experimenters, and problem-solvers who thrive in ambiguity and are excited to work on real-world AI systems alongside a high-performance team.

The Role

We are looking for AI Engineering Interns to contribute to the core intelligence behind Presto's Voice AI platform.

This is a hands-on technical internship at the intersection of large language models, real-time systems, and production AI. You will work on…
